                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Clone CTA-437LI5 is from a release of the human BAC library CTB-HS-A. The library contains cloned DNA from human sperm. See: Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1996). The clone is available from VECTOR: pBeloBAC11
                                                                                                                                                                                                                                                           NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                    all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, sequence from more than one subclone; and regions were covered by confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NEIGHBORING SEQUENCE INFORMATION: The clone sequenced to the left is CTA-237G1. The actual start of this clone is at base position 1 of CTA-437L15; actual end is at 116650 of CTA-437L15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This chromosome 8 clone was provided by Dr. Patrick Concannon (patcon@vmmc.org) at the Virginia Mason Research Institute.
                                                                                                                                                                                                                                                                                                                                                                                  This sequence was finished as follows unless otherwise noted:

can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above
                                                                                                                                                                                                                                                                                                                                                               B1 protein; intracellular mediator; modulator; inflammation; cell death; cell survival pathway; intracellular signalling; AIDS; cancer; human; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New Bl protein regulates cell death and cell survival pathways derivatives, DNA and antibodies, also regulate intracellular inflammation; for treating AIDS, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes the isolation of a novel human B1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 MetAsnGlyGluAlaIleCysSerAlaLeuProThrIleProTyrHisLy 17

human phosphorylation effectors useful for the diagnosis, treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                  246138-246168 encode human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP expression/activity.
                                                                                                                                                                                                                                                            Baughn MR;

E43398 to B44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antialterative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antialterative; untibacterial; antiviral; dermatological; antialteratic; antibacterial; antiviral; dermatological; cantipatorial; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polynucleotides, polypeptides, antibodies, agonists and antagonists from the present condition may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune calls, to treat disorders of haemacopoietic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ rejection, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The peptides, nucleotides, antibodies, agonists and sateagonists may be also be used in drug screens. C78449 to C78457 and the present sequences used in the exemplification of the present
Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           101 GlySerLeuAsnGluLeuLeuHisArgLysThrGluTyrProAspValAl 117

crutisment domain, CARD-3 and CARD-4 polynucleotides and proteins of recruitment domain, CARD-3 and CARD-4 polynucleotides and proteins of partial murine CARD-4 protein and genes. The genes and proteins of the invention are involved in the regulation of caspase activation.

CC the invention are involved in the regulation of caspase activation.

The caspase recruitment domain (CARD) polynucleotides, polypeptides, complex predictive medicine and therapeutic and prophylactic methods of assays, predictive medicine and therapeutic and prophylactic methods of creatment. The methods may be used to diagnose and treat patients which are suffering from a disorder associated with abnormal level or rate of are suffering from a disorder associated with abnormal level or rate of complex, abnormal activity of the Fas/APO-1 receptor.

CC complex, abnormal activity of the Fas/APO-1 receptor complex, abnormal activity of the raspector complex, or abnormal activity of a caspase. Diseases that may be treated include cancer cartivity of a caspase. Diseases that may be treated include cancer (particularly follicular lymphoma, carcinomas associated with mutations in p53 and hormone-dependent tumours), autoimmune disorders (e.g. carticularly follicular lymphoma, carcinomas associated with mutations systemic lupus erythematosis, immune-mediated glomerulonephritis), viral infections, Alzeheimer's disease, Parkinson's disease, amyotrophic lateral collections, Alzeheimer's disease, Parkinson's disease, amyotrophic lateral collections, Alzeheimer's disease, parkinson's disease, anyotrophic lateral collections, ansemia, myclodysplastic syndrome, myocardial infarction, and strucke. CARD-3 protein interacts with other cellular proteins, and so can be used for regulation of cellular proliferation and differentiation and cell survival. The CARD-4 proteins may also be used to for screen drugs or compounds which modulate their activity. The CARD-4 gene can express a compounds which modulate their activity and CARD-4. This sequence conduction tha

This sequence encodes the human RICK (RIP-like interacting CLARP kinase)

Cof apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10

during CD95 signalling. The invention provides methods for identifying

apoptosis signalling pathway inhibitors and activators, and methods and

compositions for screening compounds which will modulate the interactions

cof the various compositions identified: ARC, RICK, and the CIDE family of

activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening

compositions for agents, useful in the diagnosis, prognosis or treatment of

disease associated with excess cell growth and dysregulation of

apoptosis. Complexes containing RICK and CLARP can be used in drug

screening assays to identify inhibitor molecules blocking CD95-mediated

cof apoptosis. Overspression of ARC in an in vitro cell system can be used

cof identify inhibitors of the enzymatic activity of caspase-8.

Cof identify inhibitors of the enzymatic activity of caspase-8.

Cof identify inhibitors of the enzymatic activity of caspase-8.

Cof identify inhibitors of the preparation of Identian in witer of capped and cardiac disorders. Therapeutic compositions of CIDEs can be used to

creat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia,

can dead as reagents for the preparation or affinity chromatography

media, and for diagnostically measuring RICK levels. A specific inhibitor

cof an essential step in the biochemistry of apoptosis is needed. RICK

interaction with intracellular factors such as CLARP and FADD appears

cof an essential for apoptosis, inhibitors of KICK binding to intracellular

cof peppeosis factors are potential drug candidates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      84 IleCysAsnGluProGluPheLeuGlyIleValThrGluTyrMetProAs 100

Dreast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic; neutroprotective; antiviral; antiviral; hepatotropic; antidiabetic; antifinfammatory; antiviral; vulnerary; anticonvulsant; antibacterial; antifinfammatory; antidoer; vulnerary; anticonvulsant; antibacterial; antifingal; artiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's cardiovascular disorders such as myocardial ischemmias; wound healing; neurological diseases such as cerebral anoxia and epilepsy; and
Sequences F21614 - F22031 represent DNA sequences encoding human proteins
                          B58711 - B59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences F22032 - F22040 and B59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The

The present sequence encodes a murine death associated kinase protein, containing ankyrin repeats, designated DAKAR. The DAKAR polynuclectides can be used to express the polypeptides, and as probes to identify nucleic acids encoding proteins having kinase activity. DAKAR polypeptides and fragmented polypeptides are used for purifying proteins, e.g. to measure protein activity; as quality assurance agents to monitor shelf life and stability of binding partner proteins; as research agents, e.g. in assays to determine protein kinase activity, to identify novel molecules involved in signal transduction pathways, and to identify therapeutic compounds which may interfere with apoptosis; as molecular weight and isoelectric focusing markers; as controls for peptide fragmentation; identification of unknown proteins, e.g. by comparison with proteins in databases; and for preparation of antibodies. The antibodies can be used in assays to detect the presence of the protein, and to purify the protein by immunoaffinity chromatography. The antibodies can also be used to block binding of the DAMAR polypeptides to their binding partners. Compounds that inhibit the protein a business activity of DAMAR can be used to treat diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel death associated kinase containing ankyrin repeats (DAKAR) used as molecular weight marker and as controls for peptide fragmentation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               220
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           267
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        157
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                dermal papilla, human keratinocytes and neonatal foreskin fibroblasts, and mouse embryonic skin, keratinocyte stem cells and transit amplifying cells. Polypeptides of the invention may be used to treat inflammation, cancer and neurological diseases. The proteins may be used to stimulate the growth and motility of keratinocytes, to inhibit the growth of cancer cells, to modulate angiogenesis and tumour vascularisation, to modulate skin inflammation, to modulate epithelial cell growth and to inhibit binding of HIV-1 to leukocytes. The invention may also be used to treat growth and developmental defects, skin wounds and hair follicle disorders. Sequences 261606-261812 represent cDNA sequences derived from 261725-261765, 261801 and 261826 encode proteins with an N-terminal signal sequence, indicating that the proteins are secreted. Sequences 261650-261688, 261766-261817 and 261812-261817 and 261827-261829
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              to novel nucleic acid sequences derived from rat

```
The present polynucleotide encodes a polypeptide which is expressed in mammalian skin cells. The polypeptide is useful for stimulating keratinocyte growth and motility, inhibiting the growth of cancer cells, modulating angiogenesis, inhibiting angiogenesis and vascularisation of tumours, modulating skin inflammation, stimulating the growth.of epithelial cells, inhibiting the binding of human immunodeficiency virus (HIV)-1 to leukocytes, and treating inflammantory disease, cancer and neurological diseases. The polynucleotide can be used as a marker, in the identification of genetic disorders, and for the design of oligonucleotides for examining expression patterns.
                                                                        New isolated polynucleotide used in the identification of genetic disorders and encoding polypeptides used for treating inflammatory disease, cancer and neurological diseases .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              123 gileLeuHisGluIleAlaLeuGlyValAsnTyrLeuHisAsnMetThrP 140

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    846
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present polynucleotide encodes a polypeptide which is expressed in mammalian skin cells. The polypeptide is useful for stimulating keratinocyte growth and motility, inhibiting the growth of cancer cells, modulating angiogenesis, inhibiting angiogenesis and vascularisation of tumours, modulating skin inflammation, stimulating the growth of epithelial cells, inhibiting the binding of human immunodeficiency virus (HIV) 1 to leukocytes, and treating inflammatory disease, cancer and neurological diseases. The polynucleotide can be used as a marker, in the identification of genetic disorders, and for the design of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Murison

The present sequence is that of Genesis clone 971025TRAM004820HT (Fel) DNA. The translation of the clone (frame 3) is provided in 779134. The propertied has kinase activity. The invention cry9134. The purified murine polypeptides (see Y79152-56) that relates to purified murine polypeptides (see Y79152-56) that have kinase function and isolated nucleic acids encoding them (see COTYPEPERSON OF THE NUCLEIC acids encoding them (see DOTYPEPERSON OF THE NUCLEIC acids encoding proteins polypeptides, as probes to identify nucleic acids encoding proteins having kinase activity, and in assays to identify chromosomes; map nucleic acids and host cells (bacterial, yeast, plant, insect or animal) transfected or transduced with the vectors are claimed. The kinase polypeptides and their fragments are used as mol.wt. and isoelectric focusing markers, and as controls for peptide fragmentation. They also have a number of therapeutic uses, as kinases play a central role in cellular signal transduction.
                                                                                                                                                                                                                                                                                                                                                                                                            Novel murine polynucleotides encoding kinase polypeptides, used a probes to identify nucleic acids encoding proteins having kinase activity -

dermal papilla, human keratinocytes and neonatal foreskin fibroblasts, and mouse embryonic skin, keratinocyte stem cells and transit amplifying cells. Polypeptides of the invention may be used to treat inflammation, cancer and neurological diseases. The proteins may be used to stimulate the growth and motility of keratinocytes, to inhibit the growth of cancer cells, to modulate anglogenesis and tumour vascularisation, to modulate skin inflammation, to modulate epithelial cell growth and to inhibit binding of HIV-1 to leukocytes. The invention may also be used to treat growth and developmental defects, skin wounds and hair follicle disorders. Sequences 261606-261832 represent conka sequences derived from several mouse, rat or human skin cell types. Sequences 261606-26181 and 261826 encode proteins with an N-terminal signal sequence, indicating that the proteins are secreted. Sequences 261600-26168, 261780, 261812-26181 and 261827-261829 encode proteins with one or more putative transmembrane domains. Sequence 1888 BP; 433 A; 518 C; 554 G; 380 T; 3 other;

The polypeptide is useful for stimulating keratinocyte growth and motility, inhibiting the growth of cancer cells, modulating angiogenesis, inhibiting angiogenesis and vascularisation of tumours, modulating skin inflammation, stimulating the growth of epithelial cells, inhibiting the binding of human immunodeficiency virus (HIV)-1 to leukocytes, and treating inflammatory disease, cancer and neurological diseases. The polynucleotide can be used as a marker, in the identification of genetic disorders, and for the design of oligonucleotides for examining expression patterns.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Murison JG;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A cDNA clone (T43752) codes for mouse receptor interacting protein (RIP) (W04627), a protein which contains a C-terminal death domain through which RIP interacts with the Fas/APO-1 intracellular domain (ICD). RIP overexpression leads to cell death. The RIP cDNA was identified from a mouse thymus cDNA library by screening with the human RIP coding sequence (see also T43753) and sequence analysis of overlapping clones. It can be used as a probe and to produce recombinant RIP in host cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                            Receptor interacting protein having death and kinase domain to control diseases that involve abnormal apoptosis, and for diagnosis and drug screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              89 uPheLeuGlyIleValThrGluTyrMetProAsnGlySerLeuAsnGluL 106 ::::::||| |||||||||| ::::||| ::::|||

/note="Organ: prostate; Vector: pT713D-Pac (Pharmacia)
with a modified polylinker: Plasmid DNA from the
normalized library NCI_CGAP_P122 was prepared, and ss
circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from a pool
of 5,000 clones made from the same library (cloneIDs
985608-986739, 1101192-1101959, and 1217928-1220615).

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 5 libraries. The pools consisted of the following libraries and cloneDDs: Soares NBAFF pool 1: 309384-310919, 323208-325895 Soares NBAFF pool 1: 758280-760583, 772104-774407 Soares NBPRA pool 1: 758280-760583, 772104-774407 Soares NBHPA pool 1: 758280-760583, 77210407 Soares NBHPA pool 1: 772990-774407 Soares NBHPA pool 1: 77204-774407 Soares N
